1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 57-181354.

The JP '354 Abstract discloses mixing Ni-Al alloy powder with Ni powder, followed by sintering. The '354 reference does not specify the ratio of Ni-Al to Ni powder as presently claimed, and does not refer to an anode for fuel cells. These differences are not seen as resulting in a patentable distinction between the prior art and the claimed invention because mixing of the relative amounts of the two powders as presently claimed would fall within the purview of the process as described in JP '354. With regard to fuel cells, this limitation as claimed is seen as nothing more than an intended use of articles made by the claimed process and as such does not distinguish that process from the process disclosed in the prior art. Thus, a prima facie case of obviousness has been established between the disclosure of JP 57-181354 and the presently claimed invention.

3. In a response filed November 15, 2006, Applicant alleges that the mixing ratio as claimed produces unexpected results in comparison to the prior art, and/or that the claimed intended use distinguishes the invention from the applied prior art. Applicant's arguments have been carefully considered, but are not persuasive because:

a) No specific difference has been shown in any particular aspect of the present invention (e.g. 3D network, resistance to creep) versus an equivalent feature of the prior art.

b) With regard to intended use, the term "anode for fuel cells" does not imply any particular size, shape or form of a material and further does not imply any particular limitation on any step of a process of making such a material.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
